INVESTOR CONFIDENCE INDEX DECLINES TO 83.1 IN AUGUST

Boston, August 22, 2006 – State Street Global Markets, the investment research and trading arm of State Street Corporation (NYSE:STT), released today the results of the State Street Investor Confidence Index[®] for August 2006.

According to the August index, investor confidence decreased very slightly, by 0.2 points, to 83.1 from July's revised reading of 83.3. Looking regionally, the confidence of North American institutional investors fell from 98.1 to 95.2. The confidence of Asian investors increased to 86.5 from 81.1, and the confidence of European investors increased to 88.4 from 85.4.

Developed through State Street Global Markets' research partnership, State Street Associates, by Harvard University professor Ken Froot and State Street Associates Director Paul O'Connell, the State Street Investor Confidence Index[®] measures investor confidence on a quantitative basis, analyzing actual buying and selling patterns of institutional investors. The index is based on financial theory that assigns precise meaning to changes in investor risk sentiment, or the willingness of investors to hold proportionally more or less of their portfolio in equities. The more of their portfolio that institutional investors are willing to devote to equities, the greater their risk appetite or confidence.

"With Bernanke's pause in interest rate increases has come a rally in stock prices worldwide," commented Froot. "In anticipation of that, over the last five months we have seen strong increases in our measure of risk appetite based on the portfolio decisions of more than

ten thousand professional investors in the marketplace. However, most recently, investors have taken portfolio risk no further. They positioned themselves for the rally now taking place, and may well begin to take risk off once that happens.”

“In fact, U.S. investors seem to have cut back on the high levels of risk in their portfolio over the last two months, after substantial increases earlier in 2006,” commented O’Connell. Their exposure to the U.S. market, in particular, has risen with prices over the last two months. Asian and European investors, by contrast, have a smaller allocation to U.S. stocks, but are nevertheless increasing their exposures there. This is partly a sign of optimism about the need for fewer interest rate increases by the Fed, and partly a sign of their concerns: economic and geo-political with other markets in view of the developments in the Middle East.”

Since its launch in September of 2003, the State Street Investor Confidence Index® has become a key economic indicator for asset owners, investment managers and central banks. As the only index providing a quantitative measure tracking the common buying patterns of institutional investors around the world, the State Street Investor Confidence Index® offers a unique look into the investment behavior and decisions of thousands of professional investors and their investment decisions.
